a. parent class : Spell
child class : Accio and Confundo

b. Accio
Summoning Charm Accio
No description
Confundus Charm Confundo
Causes the victim to become confused and befuddled.

c. the get_description method inside the Confundo class because if a method exists in the parent and child class, the method in the child class will override.

add to Accio class:
def_getdescription(self):
       return "This charm summons an object to the caster, potentially over a significant distance"
